HoverMatt® Split Leg Matt

HoverMatt® Split-Leg Matt

The HoverMatt® Split-Leg Matt delivers the same effortless lateral patient transfers and positioning as the standard HoverMatt® Air Transfer System, but in a split-leg design that specifically accommodates specialty tables. When inflated, a cushion of air beneath the mattress reduces friction and pull force by 80-90%, making transfers easier and safer for the caregiver. Developed for use with patients in the lithotomy position, the Split-Leg Matt is ideal for gynaecology and urology procedures. Additional applications include use with any split or short procedure table used for orthopaedic and bariatric procedures. The split-leg design also facilitates the surgeon's operating position preference.

Features:

- Air-assisted technology improves patient and caregiver safety and comfort during transfers
- Inflated mattress moves patient in stable position, reducing skin shear and bruising
- Split-leg design allows for easy positioning with specialty procedure tables, while foot-end snaps help keep patients legs together during transfers
- Double coated finish provides stain resistance and easy cleaning
- Heat-sealed construction eliminates needle holes that are potential bacterial entryways
- Radiolucent and MRI compatible for artifact-free imaging
- 544kg weight limit accommodates most patients
